

# IBM Spectrum Protect Plus 10.1.8 Implementation and Administration

Kód kurzu: TSP13G

In this four-day course, you learn about installation, configuration and administration of IBM Spectrum Protect Plus v10.1.8. This begins with a review of the software features and functions, and the basic requirements, including architecture and data movement, and upgrade of the various components. Then, through lecture and hands-on labs, you learn how to deploy an environment as a virtual appliance or as a set of containers. You add providers and create customized SLA policies with options. You associate providers with policy to protect data in file systems and virtual machines, a variety of applications and databases, and Kubernetes and OpenShift containers. You configure and manage user access to the system and to the providers you protect. You manage jobs, plan and prepare for disaster recovery, view log files for monitoring and troubleshooting, and create custom reports.

## Pre koho je kurz určený

Implementers and administrators who are protecting virtual environments, containers and applications in a hybrid cloud environment.

## Čo Vás naučíme

Describe features and functions, and use the sizer too

Install and configure the server, vSnap, VADP proxy, and configure SLA Policies

Protect virtual machines

Protect databases and applications

Protect data in containers and on physical systems

Perform tasks necessary for disaster recovery

Archive data for long-term retention and regulatory compliance

Manage daily operations and troubleshooting

Manage daily operations and troubleshooting

## Požadované vstupné znalosti

- Experience with data protection
- Familiarity with Windows and Linux operating systems
- Some experience with virtualization, cloud storage, and containerized workloads
- An understanding of IBM Spectrum Protect administration

## Študijné materiály

Príručka ku kurzu firmy IBM podľa programu kurzu.

## Osnova kurzu

Unit 1: IBM Spectrum Protect Plus introduction

Unit 2: Installation and configuration

Unit 3: Data protection for virtual machines

Unit 4: Application protection

Unit 5: Container and file system protection

Unit 6: Long-term retention

Unit 7: Disaster recovery

Unit 8: Daily operations, maintenance, and reporting
